

Window Glass Replacement

BEFORE

AFTER

Fogged windows are a common problem for homeowners. Insulated glass windows, also known as double-paned glass, triple-paned glass or insulated glass, can lose their seal over time and cause windows to fog up, or windows to drip with condensation. Once a seal fails, moisture becomes trapped between the panes, and can appear as a haze, disrupting your view and making it appear like your windows are always dirty.

BINSWANGER SOLUTIONS:

- **Replacement of fogged and cracked glass with new commercially sealed insulated glass**
- **Economical: only replace damaged glass**
- **All existing frame and window components remain in place, minimizing cost and waste**
- **New insulated glass can often match existing glass**
- **Vast selection of glass types from textured glass to tints, colors and energy saving Low-E coatings**
- **Member in Good Standing of the National Glass Association**
- **Backed by manufacturer's warranty**
